

About HandyShare for Windows

July, 2016

IMPORTANT NOTICE.

Distribution of **HandyShare** for Windows is temporarily suspended.

Recently Apple Inc. reported that a serious vulnerability was found in Quicktime for Windows.

So, uninstallation of Quicktime for Windows is now recommended as workaround.

If you uninstall Quicktime for Windows, regretfully you cannot use HandyShare for Windows as the application requires functions of Quicktime to run in the background.

* For example, playback, video editing and most of file controls will no longer function in HandyShare.

For the time being, we recommend using some alternative video editing applications as listed below:

Video Playback Application

MPC-HC by MPC-HC Team

<https://mpc-hc.org/>

GOM Media Player by GRETECH Corp

<http://www.gomlab.com/>

Light Alloy by Vortex Group, LLC

<http://www.light-alloy.ru/>

Video Editing Application

Premiere Elements 14 by Adobe

<http://www.adobe.com/products/premiere-elements.html>

* Paid application

YouTube

<https://www.youtube.com/>

* Cloud service

We have started the plan for providing a new version of **HandyShare** without the requirement of running Quicktime for Windows.

The new release of HandyShare for Windows will be published in due course within 2016.

Thank you for your kind understanding.
