Need to know for retailers

- New version of Radial's Voco-LoCo, featuring improved audio performance, greater reliability, and a locking XLR connector for a secure, worry-free connection on stage
- Allows microphones to be routed through guitar pedals and effects using a standard ¼" effects loop, opening up creative possibilities for vocalists and instrumentalists
- Independent send and return controls help keep the signal clean and controlled, with a tone shift to tame overly bright pedals and a blend control to mix natural sound with effects
- Balanced XLR output feeds the PA with confidence, while built-in 48V phantom power supports condenser mics or active DIs
- Includes 9V power supply and supports 9–18V pedalboard power, making it equally suited for use on a pedalboard or in the studio

Product Feature List

- All-in-one mic preamp and effects loop controller for use with guitar pedals
- For stage and studio use, turning familiar pedals into creative tools for unconventional sound design
- Add effects pedals to voice, sax, trumpet or any mic'd instrument you can think of
- Studio-quality mic-preamp delivers clear, professional audio performance
- Dual-band shelving EQ is used to add bass to warmth, or sparkle for extra cut.
- Standard ¼" effects loop to send the signal to the pedals and back into the Voco-LoCo MK2
- Individual send and return controls to optimize signal-to-noise and reduce distortion
- Tone shift control softens harsh effects and helps tame overly bright pedals
- Blend control lets you mix dry mic signal with processed effects
- Locking XLR mic input ensures a secure, worry-free connection during live use
- Balanced XLR output feeds directly to a PA system or recording interface
- Built-in 48V phantom power supports condenser microphones and active DIs
- Phase reverse and ground lift switches help eliminate hum and phase issues
- Footswitchable effects loop with additional Mute- or All-Wet mode-switch
- Compact, pedalboard-friendly form factor with rugged construction
- Includes 9V external power supply; compatible with 9–18V pedalboard power supplies
- Designed and built at Radial Canada

Description

The Voco-Loco MK2 is an effects loop controller that enables an artist to add guitar effects pedals to a voice, sax, trumpet, or just about any other instrument you can think of. You connect the mic directly to the Voco-Loco MK2, set the level and EQ and then the Voco-Loco MK2 sends the signal to the pedals via a standard ¼" send & return effects loop.

Separate send & return levels are used to optimize signal-to-noise and reduce distortion. A tone shift control lets you compensate for overly bright pedals, the original dry signal is then blended with the wet effects signal using the mix control, and the output connects to the PA system.

The Voco-Loco MK2 comes with an external power supply, but it is also compatible with 9V-18V pedalboard power supplies, and it generates 48V phantom to power a condenser mic or active direct box.

Applications

a) Voco-LoCo MK2 on Voice

Plug in your vocal mic and control the reverb and echo effects the way you want. Take it another step further and add distortion and chorus for a special effect.

b) Voco-LoCo MK2 with Harmonica

The Voco-LoCo MK2 lets you incorporate chorus, overdrive, and reverb to your harp solos to deliver amazing tones without having to bring an amp to the gig. The blues never sounded so good!

c) Voco-LoCo MK2 with Brass

Add echo, chorus, or wah to your sax or trumpet to make your solos stand out from the crowd and deliver a unique performance to the audience that they will never forget!
